

## Working Group on Echocardiography Polish Cardiac Society

Warsaw, November 15th 2019

### TO WHOM IT MAY CONCERN

This is to certify that the TEE simulators provided by the MST company have been extensively used for teaching during many echocardiography courses organized by the Working Group on Echocardiography of the Polish Cardiac Society.

MrTEEmothy simulator is considered by many teachers and physicians attending the courses as an advanced educational tool providing realistic simulation of the TEE examination. It not only allows to teach the basic TEE views but also provides many pathological cases of the real pathologies and the system provides a unique 3D viewer mimicking the real ECHO machine software.

We wish the MST company further progress and we are looking forward to having available new pathologies and new features of this dynamically developing teaching tool.

With best regards,

Prof. Piotr Szymański MD PhD FESC

Chairman

Dr Paulina Wejner-Mik MD PhD

Board Secretary

Working Group on Echocardiography of the Polish Cardiac Society
